

USB Wedge Saver

Description

The Worth Data Wedge Saver™ allows older legacy keyboard wedge bar code readers from such manufacturers as PSC, Metrologic, Symbol, Percon, and Worth Data to attach to a USB port. Users upgrading to new PCs or Macs that only have USB ports can use this device to bridge their older wedge readers with 6 pin mini din cable connection to their new USB computer system.

The Wedge Saver will operate on any computer with a USB port and Windows® Vista, XP, 2000, ME, 98SE and even Mac OS - the cost is only **\$49** with free same day shipping!

We guarantee it will work or your money back, no questions asked!

- Compatible with PSC, Symbol®, Metrologic® and others
- Gives new life to legacy PC wedge readers
- No need to buy a USB bar code reader
- Uses 6 pin mini-din cables
- USB compliant
- Bus powered device - Hot swappable
- No driver required - Plug & Play
- Compatible with Windows® Vista, XP, 2000, ME, 98SE and Mac OS
- 2 year warranty against defects in workmanship and materials
- Made in the USA
- Low cost - **\$49.00**

Save That Old Wedge Reader

If your PC or Mac doesn't have a 6 pin mini-din keyboard port and only has a USB port, you don't have to buy a new bar code reader. You can take that old PSC, Metrologic, Symbol or other keyboard interface wedge reader and attach it to your USB only PC using the Worth Data Wedge Saver. Your wedge reader then appears to the system as a USB HID keyboard. Data is transmitted as keyboard data; exactly like keyboard wedge data! For Worth Data reader attachment, specify **USBW**.

Non-Worth Data Wedge Readers

If your PSC Laser Reader, Symbol Laser Reader, Metrologic Laser Reader or other manufacturers wedge reader cable already has a male 6 pin minidin connector, you can plug it directly into the Wedge Saver. If you have a splitter "Y" cable, the other end just dangles, or you can cut it off sharply. For readers not manufactured by Worth Data; for Symbol, PSC, or Metrologic, order the **USBX** option for \$49.

Worth Data Readers

If you have an older Worth Data wedge reader, or Worthington Data Solutions reader, (WDP, TriCoder, MagReader), order the USBW option, and in addition to the Wedge Saver, you will receive a straight cable to connect from the wedge reader directly into the Wedge Saver.

Windows Configuration

Once you plug the Wedge Saver into a USB port, Windows will sense the presence of a new "human interface device" and will install the driver for the new device. When you scan a barcode, the data comes across the USB interface as keyed data and input into any application. Of course the USB keyboard remains interchangeably usable.

PSC, Symbol, and Metrologic Wedge Readers are compatible with the USBX Wedge Reader
