- Free 2 day shipping
- Shop online or call

- Free technical support
- Same day shipping

- 30 day money-back guarantee
- Quality products, & Service Since 1985

The 5100 & 5200 TriCoder are our powerful, low cost, easy-to-use data collection portable bar code readers. Data collected with this unit is stored in the unit and later uploaded to a PC (or any computer) by USB. This is the fifth generation of the Worth Data TriCoder, which now offers more powerful features that are easier to use, while still maintaining compatibility with programs written for the earlier generations of Worth Data TriCoders.

LT5101
Includes
Built-in 1D Laser
Scanner

Patented Voice Prompts

The TriCoder's patented voice prompts allow for faster data entry, operation in extreme cold or poor lighting, and any language flexibility. It operates as an on-line, non-portable reader too!

Small but Powerful

It is small but very powerful. It is the easiest to program portable in the industry. Despite its small size and weight (less than 11 ounces with battery), this unit can scan over 200,000 individual UPC numbers into memory before uploading. If you are scanning part numbers and entering a quantity you can easily scan a warehouse with millions of items before needing to upload the data.

Simple Uploads

Each bar code scan and keyed entry is stored for later uploading to the host. You can upload directly into your program, easily update an Excel worksheet or even save the data into a file format of your choice.

• Low Cost:

LT5101 is \$699 with Built In Laser Scanner
LT5101H is \$799 with Built in Laser & Handle
LT5100 is \$999 with enhanced Laser & Handle

- LT5101H Easy Single Handed Use with Gun Handle
- LT5200 & LT5200H with Powerful 2D Scan Engines
- 2Mb Memory - 200,000 UPC Codes!
- FCC & CE Approved
- Uses Long Life Li-ion Battery (75,000 Scans)
- User Customizable Voice Prompting plus Display Prompting
- Small size: 5.9" L x 3.7" W x 1.1" D - Weight: 11oz
- Rugged Design - Survives 5 ft. drops to concrete
- Upload thru USB
- Designed, Engineered & Assembled In The USA
- 3 Inventory Programs Included - Or Create Your Own

"I just wanted to tell you how impressed I am with your TriCoder unit I purchased last week. The quality is well above what I have come to expect from other companies as is your service. I feel that this is truly a great value and with the support from your staff it simply cannot be beat."

Thank you,
Fred Daniel

The Industry's only Portable Batch Reader with Voice Prompts

5100 TriCoder Features

2Mb Memory

All 2Mb of the quoted memory is available for user data storage (This is 200,000 individual 10 digit bar codes); no memory is taken up for programs or voice messages.

USB Interface Standard

All models of the TriCoder have USB built-in. The TriCoder can be defined as a USB HID keyboard, uploading data as though the data had been keyed directly into any application as keyed data. The TriCoder can also operate in Full Speed USB mode for data upload to a file, table downloads, program uploads & downloads, voice downloads and firmware updates, (the latest firmware is always available on our website) on a PC with Windows® 11, 10, 8, 7, Vista, & XP.

Protective Cases

We have a F42 Leather Protective case and a Silicone Protective boot for added protection of the TriCoder

Your Choice of 1D or 2D Scanners

The TriCoder is available with your choice of bar code scanners: our high speed integrated 1D Laser built right into the top of both the LT5101 & LT5101H. The LT5100 model offers a more powerful 1D laser scan engine with increased range along with an optional aiming dot for ease in scanning. For 2D bar code reading you can choose the LT5200 or the LT5200H with a omni-directional 2D scan engine.

Easy Uploading

Windows program are furnished with each TriCoder at no charge for lightning fast uploading of data. With the TriCoder in USB keyboard mode, data can be also uploaded directly into any application program or into "notepad" using Windows or Mac. Simply plug the TriCoder and select data upload from the TriCoder menu.

No Programming Necessary

Most users don't have to do any programming on the TriCoder because there are 3 default programs built-in. The default programs are for typical inventory data collections and provide the following:

Default Program 0: Records all bar codes read.

Sample Program 1: Records item numbers scanned and quantities keyed in.

Sample Program 3: Records item numbers scanned and quantities keyed in - Entering Qty1 automatically for single items scanned.

Easily Created Custom Programs

The TriCoder comes with its own built-in program generator. You just describe the text and sequence of prompts plus the input data characteristics. The TriCoder then generates a working program with the custom prompts and editing included. Programming is so easy with the TriCoder, even a novice programmer can master TriCoder programming in 10 minutes. Up to 4 programs, (3 user written) can reside within. It's powerful too! Each program can have up to 97 steps. Statements possible include: Data Entry, Yes/No Branching, Branching based on data entered, Looping, Time Stamping, and Date Stamping. For more details download the Manual from our website.

Other features supported are:

Automatic Incrementing, Automatic Entry of Quantity One with Physical Inventory, Duplicate Data Prevention, Validation Tables, Tables for Updating, and output to a serial mobile printers. Output data formats are very flexible, allowing almost any format including CR separated data items, comma delimited files, and TXT CSV flat files.

Virtual Tricoder

Complicated programs can be developed with a Windows program, the Virtual TriCoder, that allows you to develop a program on your PC. You can also test the program on the PC, making any necessary changes, before downloading the finished program via the serial or usb port to the TriCoder. This program is shipped standard with all model TriCoders and is also available at our Website in the "TriCoder Downloads" section.

Voice Prompting in Addition to the LCD Display

You can pre-record up to 100 seconds of custom audible messages in addition to the standard displayable prompts on the 15 line color LCD.

Voice Prompts are an exclusive and patented feature only available on the TriCoder. Your pre-recorded messages play at the times you have specified in any language or sequence.

Voice messages are not required but they can be very beneficial in dimly lit or extreme cold areas, can facilitate faster scanning, and can be in any language.

Double Duty

The TriCoder can also function as a stationary on-line reader, performing double duty. For example, the retailer can use the TriCoder as a Point of Sale reader (from wall power) with an optional laser stand, and it can be used as a portable to take a physical inventory after hours.

TriCoder Utilities

The **Hardware Utilities** - available for free on our website - supports Full Speed USB providing:

- 1) Upload data to a file on the host computer
- 2) Download "Lookup Tables" to the TriCoder
- 3) Develop and test custom programs before downloading to the TriCoder
- 4) Download new Firmware upgrades
- 5) Record & Manage Voice Files.

TriCoder Pricing

Model	Description	Price
LT5101	TriCoder with 1D Laser Built In	\$ 699
